Dear Hiring Manager,

I am writing to express my interest in a Lead or Senior Flutter Developer role where I can combine hands-on engineering with clear technical direction. Over eight years in software development, I have focused on cross-platform delivery with Flutter across Android, iOS, web, and desktop, alongside Python-based backends and REST APIs when products require a full-stack owner.

In my current position at IKLIX in Dubai, I lead architecture and implementation for large-scale customer-facing systems, including e-commerce, POS, delivery, dashboards, and inventory. I integrate payment providers (Apple Pay, Stripe), third-party services, and Odoo for sales workflows, and I invest in performance, scalability, and release discipline. I regularly mentor engineers, run code reviews, and keep quality bar high without slowing delivery.

Earlier at Massar, I shipped production mobile applications with NativeScript for both major app stores, which strengthened my eye for native constraints, plugins, and store compliance. My earlier Android work grounded me in native SDK patterns and API-driven features.

I would welcome the opportunity to discuss how my experience in Flutter leadership, product ownership, and pragmatic backend work can support your team and roadmap. Thank you for considering my application.

Yours sincerely,

Hafiz Qasim Ali
